1,463

The number of gauging stations on the NRFA

59,000 yrs

The number of years of daily flow data on the NRFA

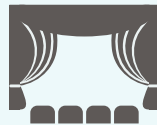

~300,000 km

The length of all rivers in the UK would stretch around the equator over 7 times

354 km

The UK's longest river is the Severn, which would take over 8 marathons to run

1 minute

The amount of time the peak flow on the River Eden would have taken to fill the Royal Albert Hall during Storm Desmond

1841

The year the oldest gauging station on the NRFA was opened, Queen Victoria was on the throne

1,000

The number of times the average flow of the Amazon is larger than that of the River Tay in Scotland

0.04%

The proportion of all the freshwater flowing into the world's oceans that comes from UK rivers

4 minutes

The time it would take average outflows of rivers in Great Britain to fill Wembley Stadium

3

The number of times the county of Cornwall could fit into the River Thames catchment
